

DBSAE – Federal Procurement Data System – Next Generation

Overview

The Federal Procurement Data System – Next Generation (FPDS-NG) provides visibility into all federal contract sourcing arrangements with commercial suppliers. It is a web-based system that offers both the public and federal government with a self-service, near real-time, searchable repository for information about unclassified government contracts with third party vendors. FPDS-NG collects contract reporting data from all federal agencies.

Capabilities

FPDS-NG is an e-Gov initiative managed by the General Services Administration within the Integrated Acquisition Environment that provides Congress with data on all federal contracts. It enables the federal government to understand where the public's tax dollars are spent. Collecting data about government procurements provides a broad picture of the overall federal acquisition process. The ability to look at all contract actions across many agencies in greater detail is key to establishing trust in the federal government and credibility in the professionals who use these contracts. With a view of federal spending, analyses can be conducted to structure strategic procurements, save money, improve government-wide management, and establish interoperability with other government-wide data systems.

Registrants to the system have access to more than 12 million contract actions from across the federal government at no cost. Users can view standard reports as well as create custom reports using FPDS-NG's Custom Reports module.

Benefits

- Contract data is available to the public in near real-time after the contract action reported
- Offers the public greater visibility and transparency into how the government is spending taxpayer money
- Collects individual contract action reports on purchases of \$2,500 or more
- Tracks the contract actions awarded for the American Recovery and Reinvestment Act. A report of Recovery Act spending is posted daily at www.fpds.gov

FPDS-NG is a program within the Business Transformation Agency's Defense Business Systems Acquisition Executive (DBSAE) directorate. The DBSAE is responsible for driving the successful implementation of DoD systems and initiatives in support of the Department's business transformation goals. Its mission is to develop, coordinate, and integrate projects, programs, systems and initiatives providing DoD enterprise-wide business capabilities to the warfighter.
